

I am a current XM radio subscriber, and when the local traffic and weather channels started, i realized how great satellite radio really was. instead of waiting till the top of the hour to get traffic and weather, i can receive it constatly updated 24 hours a day. I do not think that the NAB's petition 04-160, should be able to even be considered. Satellit radio is the best thing since cable tv. Please do not stop it short in its tracks.
